Autonomous systems

Weekly Report N°13 for
School year 2023-2024

RubbleScout,
"Navigating Chaos, Saving Lives"

Student:
Lorenz CAZAUBON

Supervisor:
Pascal MASSON

Unfortunately during this session I wasn't able to make any progress on the RubbleScout project, as over the last few days I've been helping the Hirondelle project, which I'm also part of, to get a decent prototype ready for the final of the 'young start-up challenge' (Challenge Jeunes Pousses) organised by Telecom Valley. For this project, I've mainly been doing assembly, wiring, soldering and a bit of coding so that my mates could work on the oral presentation and not worry about the prototype.

I'm going to try to catch up with the big delay I've had over the next few days, and I'm probably going to start working on the idea of local data processing using a nvidia jetson nano card.
